Applications Developed

Meals 4 Me | [Live] [GitHub]

- Enter ingredients to find recipes using those specified ingredients.
- Used the **AGILE** process to create our application from the ground
- Created our own database using **MySql** and an automated **CRON** job ran through **PHP** on an **AWS** server. **DB** has over **300k** rows.
- Used **PHP** for our backend to interact with our **MySql** database and created endpoints for our frontend to receive **JSON** data.
- Created unique user login with **PHP Sessions** and **MySql**
- Created the whole application using the **REACT** framework.
- Hosted our application on an **AWS EC2 UBUNTU** server

Concert Finder | [Live] [GitHub]

- Input a location and pick a genre to find concerts near you.
- Used the **AGILE** process to kickstart the development of this application and used **GIT** to collaborate with each team member
- Used **HTML, CSS, jQuery,** and **JAVASCRIPT** to dynamically create everything and interact with the DOM.
- Used **AJAX** calls to communicate with various **API's** to receive and manipulate **JSON** data and append it to the DOM.

Student Grade Table | [Live] [GitHub]

- **Content Management System (CMS)** that allows for the ability to create, read, and delete student grade information from a **DB**.
- Employed **Javascript** and **jQuery** to manipulate data and the DOM.
- Utilized **AJAX** calls to a **MySQl** database to retrieve **JSON** data.
- Constructed a **PHP** backend that allows users to do **CRUD** operations within the **MySQL** database hosted on an **AWS UBUNTU** server
